Subject: RED HILL SOW DRAFT including PILOT PROGRAM LANGUAGE
Attachments: Red Hill SOW_EPAandDOH_25EB15.docx

All,

The attached document reflects the current SOW, including language that was accepted by all Parties on the last call. As a result, I have removed track changes for the entire document. Two outstanding items remain.

- 1) The deliverables table has not been updated. In the interest of time, we thought it would be more efficient to pass the entire SOW to Navy and DLA for their review. During the Navy and DLA review, we thought the Navy and DLA could update the deliverables table, per Captain Tufts's comment still on Section 9 of the SOW.
- 2) We added section 3.6- Pilot Programs. Please review and revise as appropriate because substantial language has been added. The intent of the language was meant to clarify the pilot program process and elucidate aspects of the pilot program. We believe there is consensus for the following:
 - a) Pilot programs shall be approved by the Regulatory Agencies prior to installation.
 - b) If successfully installed and performing as expected, the Navy and DLA may continue operating a piloted tank for use as if it received BAPT
 - c) Pilot program success must be evaluated at some future date(s) to determine performance.
 - d) The duration of a pilot program is finite.
 - e) Deploying pilot programs should be deliberate, but not excessively burdensome.
 - f) Results of the pilot program may be used in future considerations of BAPT.

This was EPA and DOH's initial draft of 3.6 and not intended to be final language. Please let us know when you expect to provide a revision and if you'd like to set up a future call to discuss 3.6 or the SOW in general.

Thanks for your review.
